WHERE AUROS IQ CAN HELP

## auros IQ

Auros IQ can help improve all areas of an organization. However, there are some projects that have a better fit for Auros IQ. Here are some of the factors that qualify a project as a "good fit."

Where Omission of Knowledge is Painful

A checklist, document, or procedure is typically put in place because omission of that knowledge is painful. They're created to ensure a person or team has encountered a consideration, constraint, opinion, point of view, document, or procedure in a complex process.
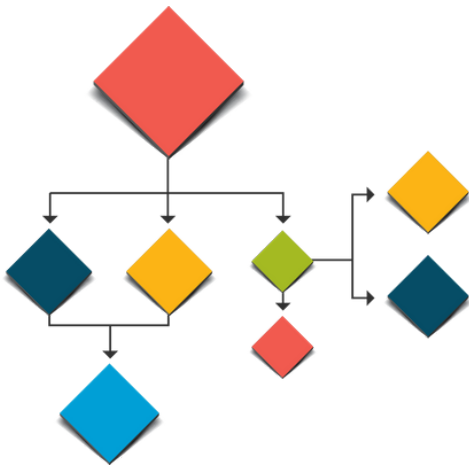

Examples:

- Lessons learned
- Engineering sign-off
- Design review
- Design guide checklist
- Best practice checklist

Auros IQ ensures all important knowledge is delivered to the user in context.

Where Standard Work Exists

Whenever multiple people or teams perform rigorous work, it's important to stay consistent across projects and share best practices.

Examples:

- Business and project templates
- Standard procedures
- Standard work instructions

Auros IQ leads teams to adhere to standard work and processes, promoting consistency across teams, time, and geography.

Where There's a Need for Traceability or Audit Trails

Anywhere that decisions need to be documented, traceability of decisions must be available, and complex systems need to guide key decisions for legal or liability reasons.

Examples:

- Any audit or confirmation process
- Any key decision that needs to be documented as a requirement or for legal reasons

Auros IQ guides teams to make the right decision, while creating traceability and documentation of the decision.
