

A Powerful Knowledge Operating System

Transforming product development processes by capturing, provisioning, evaluating, applying, and managing knowledge with timely precision — directly within your teams' workflows.

Auros IQ Effectively Optimizes Complex Processes

- Eliminates recurring mistakes and reduces costs
- Preserves and increases knowledge sharing
- Improves workforce efficiency
- Reduces undesirable project variations
- Reduces siloed and hidden expertise

A Unique Approach With Transformative Results

Project Management & Agile Team Collaboration

Auros IQ operates on the unique *Knowledge Aware* approach. Unlike traditional Knowledge Management (KM) strategies, this approach continuously captures, validates, and delivers knowledge directly to employees as they work. This strategy ensures complex product development processes are simplified and costs are reduced, while accuracy, saved resources, and knowledge accessibility are increased.

Traditional KM solutions such as document vaults, checklists, and human recall are passive and cannot as effectively capture, share, and promote the reuse of knowledge. Other challenges associated with traditional KM include:

- Knowledge quickly becomes outdated
- Knowledge is difficult to locate
- Lacks the ability to link related knowledge
- Valuable knowledge leaves with employees
- Company expertise is compartmentalized

Provisioning & Delivering Knowledge Directly Into Your Workflow

Auros IQ intelligently delivers knowledge directly into your workflow, while you work, by utilizing knowledge packets.

These granular units of knowledge ensure you receive accurate, timely, and inter-connected knowledge as you move through the various stages of your product development workflow. Automated reminders, active flowcharts, and other software features enhance project management.

Conveniently Integrates With Existing Systems

Auros IQ Service-Oriented Architecture (SoA) enables easy integration with existing systems. Commercial integrations with popular CAD and PLM tools are also available.

- AutoCAD™ Connector
- Catia™ Connector
- Creo™ Connector
- General Knowledge Connector
- NX™ Knowledge Connector
- Solidworks® Knowledge Connector
- Team Center® Knowledge Connector, and more
